ABOUT

Urban centers in Poland and in the world are developing dynamically, which is also associated with pressure on the natural environment. Already today, the 75% of greenhouse gas emissions come from there. The conference will be an opportunity to reflect on how cities can continue their development, while reducing their negative impact on the environment and providing a decent and healthy living to their inhabitants. The participants of the event will look at challenges, such as: investments in infrastructure or the use of available financing models. They will also learn lessons that have worked succeeded Polish cities such as Gdańsk.

The Urban Agenda for the EU

With the establishment of the Urban Agenda for the EU Community in 2016, European cities have gained more ability, through their partnerships, to influence the shape of EU policy on issues directly related to the urban development. The priority topics of the agenda included, among others, air quality, adaptation to climate changes, changes in the energy model or mobility. One of the advanced urban adjustments represent cities of Gdansk and Barcelona (twinning cities).

FOR WHOM

The webinar is an opportunity to meet experts on sustainable development and innovative technologies, representatives of regional administration and Catalan institutions, business delegates and its environment, non-governmental organizations, research and academic institutes.

FORMULA

The event will be live streamed in real time and will be recorded (at the disposal of KG RP in Barcelona and PHIG) and can be distributed as required.
